EDUCATION

Brandeis School of Business and Economics — Waltham, MA
MS, Finance (STEM-Designated) — 01/2026 – 12/2026
GPA: 3.9 / 4.0 | Merit-Based Scholarship Recipient
Relevant Coursework: M&A Analysis, Private Equity, Corporate Financial Modeling, Credit Risk, Options and Derivatives, Fixed Income

Bentley University — Waltham, MA
BS, Corporate Finance & Accounting | Minor, Computer Information Systems — 09/2021 – 05/2025
Dean's List (Multiple Semesters) | Presidential Scholar
Relevant Coursework: Financial Modeling, Advanced Managerial Finance, Financial Markets and Investments

WORK EXPERIENCE

RSM — Tbilisi, Georgia
Financial Audit Intern (Return Engagement — University-Required) — 06/2026 – 07/2026
- Built the indirect-method statement of cash flows for a $4.5M-revenue client as a self-reconciling, SUMIFS-driven Excel model sourced directly from the trial balance; included in the issued financial statements and retained as the template for the following year's engagement
- Rebuilt an 11-tab reporting workbook after the statement of financial position failed to reconcile, tracing the break to erroneous year-end adjustments and remapping ~35 Georgian-language trial balance accounts to the correct statement line items; the restored statements agreed to prior-year comparatives and cleared review by the managing partner

Financial Audit Associate — 05/2024 – 08/2024
- Executed the end-to-end audit of a $250K alcohol-producer subsidiary under IFRS, analyzing sales, COGS, cash, inventory, and fixed assets and proposing adjustments approved by senior review; tested AR and inventory on a large agricultural retailer audit
- Supported an engagement for a Chinese contractor on Georgia's Rikoti Highway, an ADB- and EIB-financed infrastructure project, coordinating across language and reporting-standard barriers to deliver month-end close in SAP Silver

Audit Intern — 05/2022 – 08/2022
- Completed 60 hours of firm instruction in accounting principles, tax legislation, and audit methodology, then continued as Audit Assistant, vouching client documentation against recorded transactions and preparing work files in RSM's standard forms

Bank of Georgia — Tbilisi, Georgia
Corporate Banking Intern — 07/2023 – 08/2023
- Built credit analysis models from raw financials and ran ratio and sensitivity analyses, reviewed by senior banking officers, that supported approval of $2M+ in corporate facilities and surfaced risks driving rejection of a $3M loan request
- Evaluated borrower liquidity, leverage, and cash flow trends across corporate and project finance clients, contributing analysis that informed long-term financing approval for a renewable hydroelectric infrastructure project
- Researched Georgia's microfinance sector through a regulatory shift that capped rates from 200% to 50% and contracted the market by ~80%, synthesizing findings into briefings for the corporate banking team

ACADEMIC PROJECTS

M&A Advisory Memorandum: Salesforce / HubSpot, Brandeis University — 01/2026 – 05/2026
- Independently authored a 15-page sell-side advisory memo and Excel model on a hypothetical Salesforce acquisition of HubSpot, building five-year projections, computing beta from 10 years of monthly returns, and triangulating valuation via DCF, trading comps, and precedent transactions to recommend a $17B all-cash bid financed by $10.4B in new debt retired within ~1 year
- Modeled three deal structures (100% cash, 50/50, 100% stock) with accretion/dilution analysis, synergy ramp schedules, purchase price allocation, and pro-forma leverage, stress-testing how quickly combined free cash flow retired the acquisition debt

Leveraged All-Weather Risk Parity ETF, Brandeis University — 01/2026 – 05/2026
- Designed a 200%-leveraged All-Weather ETF in Python using risk parity optimization with EWMA covariance estimation, grid-search parameter tuning across 72 configurations, and monthly rebalancing across four asset classes (bonds, equities, commodities, TIPS)
- Expanded to a 20-ETF fund using tracking error minimization with sleeve-level constraints, comparing MA vs. EWMA covariance models with train/test validation; identified the 2022 bond-equity correlation regime shift as risk parity's central challenge

Quantitative Portfolio Management, Bentley University — 01/2025 – 05/2025
- Built a multi-factor equity model on the S&P 1500 in FactSet, estimating factor premia and evaluating alpha through regression analysis; used Brinson attribution across GICS sectors to isolate allocation and selection effects

Financial Modeling Bootcamp, Brandeis University — 01/2026 – 05/2026
- Constructed integrated three-statement models, DCF valuations, and sensitivity analyses under deal-side practitioner standards, building on the FMI Foundations curriculum

SKILLS & ACTIVITIES

Technical Skills: Excel (three-statement models, DCFs, sensitivity analyses, PivotTables, Macros), PowerPoint, Python (NumPy), FactSet, CaseWare, SAP Silver, QuickBooks
Certifications: Financial Modeling Institute (FMI) Foundations, Bloomberg Market Concepts (BMC), Essential Financial Modeling (Gridlines)
Activities: Global Markets Investment Club; Brandeis Consulting Association; Tutor at Bentley University's Lab for Economics, Accounting, and Finance (LEAF), 09/2023 – 05/2025
Languages: English (Fluent), Georgian (Native), Russian (Conversational)
Interests: Chess, Boxing, Horse Riding, Basketball, Volleyball
